Co-Director, Zero to Thrive

University of Michigan

(she/her/hers)

# Pathways to Professional Development

**Pathways to Professional Development; Building Foundations in Infant and Early Childhood Mental Health** was developed to build workforce competence and to prepare professionals working in the perinatal and birth to 5 periods

- 30 webinars focused on the foundations of Infant and Early Childhood Mental Health.
  - Provided live virtually
  - Recorded for viewing as LMS modules
- Diagnostic Classification of Mental Health And Developmental Disorders of Infancy and Early Childhood (DC:0-5) offered virtually.
  - View all offerings here → <https://www.mcsilverta.org/special-initiatives/pathways-to-professional-development/>

The aim is to develop a well prepared and competent workforce trained to **identify** and address mental health concerns early, to **promote** awareness of mental health, to **prevent** long-term problems and to **intervene** to help children stay on developmental track.

Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

POWERED BY NYU MCSILVER

# Who we are

These trainings are funded by the New York State Office of Mental Health (OMH) and provided by the New York Center for Child Development (NYCCD) in collaboration with CTAC.

- **New York Center for Child Development** (NYCCD) has been a major provider of early childhood mental health services in New York with a long history of providing system-level expertise to inform policy and support the field of Early Childhood Mental Health through training and direct practice.
- **NYU McSilver Institute for Poverty Policy and Research** houses the Community and Managed Care Technical Assistance Centers (CTAC & MCTAC), and the Center for Workforce Excellence (CWE). These TA centers offer clinic, business, and system transformation supports statewide to all behavioral healthcare providers across NYS.

**NYCCD and McSilver** also run the **NYC Perinatal + Early Childhood Training and Technical Assistance Center (TTAC)** which offers ongoing training and technical assistance for those working during the perinatal period to age 5

# Overview

- How can providers effectively, and respectfully, support parents with a range of disabilities from pregnancy through early parenting?
- Strategies for delivering inclusive support, identifying strengths and support needs, and nurturing early relationships.

Pathways to

# Learning Objectives

*After this presentation you should be able to:*

- Understand the importance of recognizing disability and parent support needs in our work.
- Describe the impact of ableism, intersectionality, and disparities in parenting and caregiving experiences for parents with disabilities
- Identify key research findings related to risk and protective factors for parenting and child outcomes when a parent has a disability.
- Discuss strategies for inclusive, accessible, and supportive care

Pathways to

# Note on language used

I will use the term “parent” and “caregiver” interchangeably, recognizing that young children have many important relationships.

Also, I will use terms “mother” or “father” only when describing specific individuals who identify with that term, and will use self-designated pronouns to describe individuals in case vignettes or participants in research studies.

# Definitions

**Disability** refers to a wide range of conditions that may impact how individuals interact with the world around them.

- **Apparent disabilities:** mobility disabilities, limb differences, some neurological conditions, etc.
- **Non-apparent disabilities:** mental health conditions, intellectual and developmental disabilities, learning disabilities, chronic pain, chronic illnesses

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

# Disability Prevalence

- More than 1 in 4 adults report having some type of disability.
- Approximately 10% to 15% of reproductive-aged people report having a disability.
- Disabled people are just as likely as nondisabled people to plan pregnancies and become parents.

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

POWERED BY NYU McSILVER

# Focus of this presentation

- I will include information about parents and caregivers with apparent (physical) disabilities, but was asked to emphasize work with parents and caregivers with non-apparent disabilities
- There are many different “types” of non-apparent disability
- I will be focusing on two today- intellectual disability and autism

Pathways to

# Intellectual Disabilities/Developmental Disabilities

## An intellectual disability (ID):

- Occurs before 18 years of age
- Significant limitations in intellectual functioning and adaptive behavior in cognitive/conceptual, social, and adaptive (practical) skills

## Mild cognitive limitation:

- May have been diagnosed at some time in their lives.
- Lower than average learning, communication, judgment and understanding abilities
- Eligibility for service varies by state

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

# Autism Spectrum Disorder

- While attention is paid to the numbers of children now diagnosed with autism, there are many parents with autism
- Sometimes their diagnosis is “discovered” as a result of learning about their child’s autism diagnosis
- 5,437,988, or 2.21% of adults, in the US have autism (CDC, 2017)
- Youth and adults with lived experience of autism have been strong advocates for their experience- raising awareness and challenging many of the common labels, definitions, and assumptions

# Some 'curb cuts' that may affect our work..

- Closed captioning or live-captioning for talks and trainings
- Flexible-height workstations / standing desks
- Hybrid work and telework
- Text-to-speech and voice-to-text technology
- So many more...

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

# Disability and Intersectionality

- **Intersectionality** (Kimberlé Crenshaw, 1989)
- Offers a way to understand how multiple identities intersect to shape experiences of privilege and oppression.
- Inclusive of the broad range of identities (e.g., race, gender, gender identity, class, etc.)
- Disability as a category of identity is frequently overlooked

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

CENTER FOR CHILD  
DEVELOPMENT

ctac  
POWERED BY NYU McSILVER

# Disability and Intersectionality cont'd

- Furthermore, people with disabilities have noted that their other identities may not be recognized by others
- Attention to structural and systemic racism, ableism, and bias is critical, as these have important implications for equity in our work with families, including equitable treatment by child serving systems, including child protection

Pathways to

“There is no such thing as a single-issue struggle because we do not live single-issue lives.”

- Audre Lorde

(from “Learning from the 60s” in *Sister Outsider*)

# Medical & Social Models of Disability

- Medical models define disability as a deficiency or abnormality
- Person with disability is the “recipient of care”
- The “change agent” is the professional or medical “expert”
- The expert role is to diagnose and treat
  
- Social models make a shift towards focusing on institutional barriers, accommodations, and increasing accessibility

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

# Cultural Models of Disability

In contrast, cultural models place an emphasis on *the value of human diversity*

- A cultural lens sees disability as socially and culturally constructed, and the “cause” of problems is rooted in ableist ideology
- Challenges the concept that disability is inherently a problem
- Centers the lived experience of people with disabilities

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

Office of  
Mental Health

NEW YORK  
CENTER FOR CHILD  
DEVELOPMENT

ctac  
POWERED BY NYU McSILVER

# Person-first vs Identity-first Language

- Increasing use of identity-first language- e.g., “I’m autistic”
- Others prefer person-first language- e.g., “I have autism” or “Person with autism”
- Some studies suggest that younger adults are more comfortable with identity-first language than parents or providers
- Which one is “better”?
  - Ask! Only the person you are referencing can tell you what they prefer.
  - Respecting that both are preferred by some, I will use these interchangeably in my presentation

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

CENTER FOR CHILD  
DEVELOPMENT

POWERED BY NYU McSILVER

# Personal Example, cont'd

- Frameworks and language:
- In a conversation with my adolescent autistic son I made a comment about “high functioning” autism
- He challenged my language, noting that *all people need support*
- “People have higher support needs in some areas, while others may have lower support needs in that area”

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

POWERED BY NYU McSILVER

# Personal Example -- Frameworks and Language

- Simple explanation, but important
- He shifted the focus from a “deficit in the individual” to a context that labels and constrains, or supports, people
- He offered a way to describe needs that allowed for universality (“we all have needs”) and for valuing diversity
- Placed the responsibility on others (people/institutions), to offer all people the support needed to achieve their full potential and thrive

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

# What Does the Research Tell Us?

- Research can help us understand more about the experiences of parents and caregivers with disabilities
- Empirical (quantitative) studies – but also qualitative research and first- person narrative accounts
- *Learning from those with lived experience*
- Will include data reflecting the voices of people with apparent and non-apparent disabilities

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

POWERED BY NYU McSILVER

# Ways to Learn More About Parenting with a Disability?

- Personal and narrative accounts offer valuable learning!
- Read books, watch movies, follow blog posts written by people with experience of disability
- Asking parents about their experiences
- Seek opportunities to learn from people with disabilities
- Review the research
  
- Be wary of leaning only into 'expert opinions' (including mine!) and expect a diversity of perspectives, opinions and experiences!

# Disparities for People with Disabilities

Exist across the spectrum of perinatal to early childhood

- Pre-conception/Pregnancy
- Labor and delivery
- Postpartum
- Parenting/Early Childhood

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

POWERED BY NYU McSILVER

# Preconception

- People with disabilities report a desire to have children at similar rates to those without disabilities
- People with disabilities experience less validation for these wishes
- Bias and invisibility may preclude opportunities for pre-conception counseling or supporting family planning

## Reflective Question:

- *How can you support family planning with your clients?*

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

Office of  
Mental Health

NEW YORK  
CENTER FOR CHILD  
DEVELOPMENT

ctac  
POWERED BY NYU McSILVER

# Pregnancy

- People with disabilities experience disparities in prenatal care
- These include delayed or missed care, as well as experiences of physical and/or systems barriers
- Higher rates of utilization of emergency departments

## *Reflective Question:*

- *How might you address barriers to responsive and effective prenatal care with your clients?*

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

POWERED BY NYU McSILVER

# Pregnancy Experiences of Mothers with Physical Disabilities

Women report a range of (mostly negative) reactions from family and friends in response to their pregnancies, including:

- Initial negative reactions
  - e.g., one mother reported being “really sad” after telling her family she was pregnant because their first response was “I’m sorry.”
- Concerns regarding the mother’s health
- Questioning parenting capacity
- Negative perceptions of disability
- Some women described more positive attitudes and reactions

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

# Pregnancy Experiences of Mothers with Non-Apparent Disabilities

- Challenges navigating complicated healthcare systems
- Too short visits with doctors
- Limited time for explanation and discussion or to ask questions
- Resources and materials are often not accessible
- Experiences of judgment
- Distrust and concerns regarding child protection involvement
- Overstimulating exam rooms (e.g., bright lights, loud noises, "crackly paper")

C.S. Mott Children's Hospital and Von Voig...

## One family's story: What a difference a *doula* makes...

Kristin Wilks, a mother of two, recently gave birth to her daughter Aurora Rose at Von Voigtländer Women's Hospital. Wilks and her husband, Steve, are Deaf. Kristin has a cochlear implant and uses spoken English and American Sign Language (ASL), while Steve uses ASL.

"I finally had the birth I had hoped for all along, surrounded by people who truly understood and respected me," said Kristin.

However, in 2021, Kristin's experience was very different.

When she delivered her son, Liam, during the height of the COVID-19 pandemic, she faced a number of challenges.

"It was hard, traumatic, overwhelming, exhausting and stressful all at once, especially being Deaf and first-time parents," said Kristin.

# Postpartum

- Mothers with disabilities are more likely to experience postnatal depression and anxiety disorders
- Higher utilization of ERs
- Few accessible resources to support newborn and infant care

## Reflective Questions:

- *What resources and supports do you offer to new parents with disabilities?*
- *How can you help parents advocate for their own mental health needs, (particularly in the face of realistic worries about child welfare involvement)?*

# Perinatal depression (Brandie Bentley et al, 2025)

- Data from the Pregnancy Risk Assessment Monitoring System (PRAMS) including women without (93%) or with 1+ disability (7%) (N= 33,854)
- Women with disabilities more likely to report antenatal (43%) and postpartum (33%) depression (vs 14% and 12% for women without disability)
- Non-Hispanic white disabled women reported higher antenatal depression, while Non-Hispanic Black and American Indian/Alaskan Native (AI AN) disabled women most likely to report postpartum depression
- *Intersectionality point: Non-Hispanic Black and Non-Hispanic AI AN disabled women more likely to have PPD than women with only one of those identities*

# Child Protective Services Involvement

- Parents with disabilities, including ID/DD, are more likely to experience scrutiny and monitoring by CPS or other mandated reporters, elevating the likelihood that their children may be removed
- Indeed, parental rights more likely to be terminated ("TPR") -- sometimes solely because of ID
- 42 states include parental disability as a grounds for TPR
- This often happens *without a meaningful assessment* of parenting capacity, ability, or possibility of success in parenting with appropriate supports

# Child Protective Services Involvement cont'd

- Despite challenges faced people with disabilities, including physical and intellectual disabilities, can be good parents and provide adequate, safe care
- The capacity for adequate nurturing, responsive relationships and safe care *cannot be determined on basis of intelligence alone*
- IQ is not necessarily predictive of parental competency when above ~55-60
- Decisions about parenting capacity must rely on a case-by-case judgment of abilities relevant to the rearing of children rather than IQ level alone

# Overarching Principles

- See the whole person, not defined by disability
- Respond to the individual's specific, and unique, needs
- Attend to entire family –attention to child, parent/caregiver, partners, extended family
- Solicit and address questions and check for understanding
- Support self-advocacy and agency
- Consider disability as a source of strength and resilience

## Parent-Centered Planning: A New Model for Working with Parents with Intellectual and Developmental Disabilities

Elizabeth Lightfoot and Sharyn DeZelar • March 2022

# Preparation and Scheduling/Inviting Phases

- Meet with parent and 1-2 support people (respecting parent desires)
- Explain parent-centered planning
- Identify other supporters to invite for to the planning meeting(s) using a relational map to identify possible supporters from various contexts of parents' life
- Decide when/where to meet, send invites

Pathways to  
Professional Development  
Building Foundations in Infant  
and Early Childhood Mental Health

POWERED BY NYU McSILVER

# Parent-Centered Planning Meeting & Follow Up

- Identify parents' goals, dreams, visions for their family, and any strengths or difficulties they may have already encountered
- Break down goals- attainable, short-term focus
- Identify ways supporters can help parent achieve these goals
- Determine if additional resources are needed goals
- Create a visual map / flowchart of the plan
- Follow up phase- meet with parent and supporters to initiate steps; problem solve; not to do *for*, but to support and guide the process

# Parenting on the Spectrum... Advice from a Mom

- Adapted from: <https://musingsofanaspie.com/aspergers-and-motherhood/>
- Infants can be stressful, unpredictable, loud, & need lots of physical contact
- This can lead to 'sensory overload'.
- A keys to surviving the first months is support
- All new parents need time for themselves to "de-stress" or regroup, but this can be especially important for parents with autism.
- You don't have to feel guilty- needing a timeout doesn't make you a bad parent. Plan ahead! It's okay to ask for help from a partner, sitter, etc., so that you can take a short break. Getting help can make you a better parent in the long run.

## Being an autistic parent can hold advantages, too...

Many of things that babies/toddlers find calming may also be soothing for parents on the spectrum, for example:

- **A rocking chair:** Lots of autistic adults still find rocking to be soothing-- and when you're doing it with a baby in a rocking chair, no one looks at you funny!
- **Music:** Singing to your baby, dancing around the living room with your toddler, or just enjoying a favorite song together can all be soothing.
- **Pets:** Lots of autistic adults relate to/feel comforted by animals. Petting or playing quietly with a pet is a way to spend time together *and* de-escalate.
- **Walking:** A quiet walk combined with fresh air and sunshine is a good way to head off a potential meltdown for both you and baby

## More potential advantages - toddlerhood..

- Parents with autism may have a big advantage in parenting a toddler: **loving routine!**
- You may find nothing wrong with reading the same book every night before bed, six weeks running!
- Your child needs to have one special toy with him everywhere he goes? Or to wear clothes that are all the same color every single day? *No problem!*

## Young children and socializing

- Young children benefit from time to play and socialize with other children
- This can occur in daycare, playgroups, at the park, etc.
- Parents in playgroups are often there as much to make friends for themselves as they are to socialize their children.
- If your inclination is to avoid social situations, you may find playgroups unappealing, and want to find other ways to support your child socializing with others
- But-- this can be a great way for you to make friends around a shared interest (your toddlers!). Still, it's not required

### Plain Language

By Self Advocates Becoming Empowered | August 22, 2019

# Using Plain Language

### Plain Language Checklist

	Puts most important information first
	Focuses on need to know, not nice to know
	Avoids jargon and acronyms. If you can't avoid jargon, explain what the jargon means!
	Has words that are 3 syllables or less
	Uses short sentences. One idea per sentence.
	Has less than 15-20 words per sentence
	Uses common, "living room" words
	Speaks to the reader. Use "you" and "we"
	Uses active voice. (Person + action + object) Tom painted the house. The house was painted by Tom.
	Uses words that are culturally appropriate
	Repeats important words and phrases
	Is direct and clear

Did you use graphics, pictures or symbols to help explain the message? Place pictures to the left of text. Use with your main points. No more than 4 to 5 pictures on a page. You do not need a picture for every sentence. Ask others to review your choice of images.

# "Advice for Expecting Parents"

(Resource available online)

National Research Center for Parents with Disabilities  
Parents Empowering Parents  
Padres Empoderando a Padres

**Advice and facts for mothers and expecting mothers with intellectual disabilities**

"Some mothers have intellectual disabilities (ID). Having an ID means it is harder to learn and understand things. But everyone can still learn new things. Sometimes it just takes longer. Having an ID can also mean it is hard to do some things by yourself, so you may need extra help. Mothers with ID can still be good parents and raise their children."

# “Advice for Expecting Parents” cont’d

“Facts about parents with Intellectual Disability (ID):

- Just because you have ID does not mean your child will too.
- Having ID does not mean you are a bad parent. You can be a good parent.
- Parents with ID sometimes have a hard time getting healthy food. They may also deal with stress and worry.
- Raising children without help can be hard. It is important to look for help at the beginning, even before your baby is born.
- People with ID may need help understanding pregnancy and childbirth.”

- Anything you saw as a strength?
- Anything a concern?
- Anything you would add?

# “Advice Regarding Pregnancy and Childbirth...”

“It is important to ask for help. Everyone needs help when they are getting ready to have children. There is help you can ask for while you are pregnant:

- *Extra time with the doctor.* This will help the doctor explain things to you about your pregnancy.
- *Ask your doctor lots of questions.* Ask again until you understand the answers!
- *Advice in clear language* to help you understand what it is like to give birth
- *Tools to make pregnancy easier.* An example might be a phone app to track your pregnancy. You can share information from the app with your doctor
- *Community support.* Reach out to other parents with ID to see what they did when they were pregnant or raising children.”

- Anything you saw as a strength?
- Anything a concern?
- Anything you would add?

and Early Childhood Mental Health

# “Advice Regarding Parenting ...”

- If you are having a hard time helping your toddler with tantrums, you could ask your child's daycare teacher.
- You could also ask your partner or friends for help.
- Lots of parents- with and without disabilities- have a hard time with tantrums.
- Talk to other parents with and without disabilities to see what they have done well to raise their kids.
- You can find parenting groups in person or connect online.

# Reflective Practice

# Reflective Practice: “Turning the Gaze In”

- Reflective Supervision and Consultation
  - Attention to parallel process
  - Space to go beyond “what to do” and to consider how it feels to “be with” a parent/caregiver and child
  - How that might help us to better understand their experiences?
  - *This can include-* How do we understand power dynamics in our relationship with parents to help us understand and address experiences of stigmatization, discrimination, and oppression?

# Reflective Practice: “Turning the Gaze In”

- “Critical reflexivity”:
  - Brave space to consider our personal and professional identities and how these influence our praxis,
  - Space to interrogate systems and practices that reinforce marginalization
  - Examining our personal social identities and issues of power and oppression in our work with families

# Returning to the Learning Objectives...

- Understand the importance of recognizing disability and addressing parent support needs in our work.
- Describe the impact of ableism, intersectionality, and disparities in parenting and caregiving experiences for parents with disabilities
- Identify key research findings related to risk and protective factors for parenting and child outcomes when a parent has a disability.
- Discuss strategies for inclusive, accessible, and supportive care
